

The Tick Protocol

Lab 001.1 Book of Time — Supporting Media

Kirandeep Kaur · conformingcredit.org · 02026

Seven panels: dot, tick count, mod-N circle, phase wedge, CAD helix, helix through deep time, spiral pitch. Visual proof that time emerges as geometry from counted distinction.

Figure 1. The dot (+1). One distinction creates before and after.

Figure 2. Tick count. Ordinal time on a line before metric duration.

Figure 3. Mod-N cycle. Finite budget closes the line into a circle.

Figure 4. Phase wedge. Angular position and spread on the cycle.

Figure 5. CAD helix. Cycles lift through accumulation.

Figure 6. Helix through time. Deep time as structural return.

Figure 7. Spiral pitch. Memory across cycles at the waist.

Prototype path (eight weeks if selected)

1. HelixClock CLI — append tick, verify chain, export head hash with 02026 anchor.
2. Phase dial — hourglass position (accumulation / Landauer waist / deployment).
3. Prahar ring — eight three-hour segments; segment 7 settlement-only (no new ticks).
4. Public demo — one day, N ticks, one verifiable export.

HelixHash (PyPI) exists. Geometry exists. Gap: civic packaging.
